COMPLEX ANALYSIS SEMINAR

COMPACTNESS OF THE $\overline{\partial}$ -NEUMANN OPERATOR AND OF COMMUTATORS OF THE BERGMAN PROJECTION WITH CONTINUOUS FUNCTIONS

Mehmet Celik

University of North Texas at Dallas

ABSTRACT: We show that on a bounded pseudoconvex domain compactness of the $\overline{\partial}$ -Neumann operator on square integrable forms, compactness of commutator operators (of the Bergman projection with functions continuous on $\overline{\Omega}$) on square integrable $\overline{\partial}$ -closed forms, and compactness of the canonical solution operator of the non-homogeneous $\overline{\partial}$ -equation on square integrable $\overline{\partial}$ -closed forms are equivalent. (This is a joint work with Sonmez Sahutoglu.)
